

Locauto Rent OTA specification for vehicle reservation

Implementation guidelines

Overview

The webservice uses the SOAP protocol and provides an interface which allows trading partners to query the available vehicles and rates or to submit reservations to the system using the open-source specifications defined by the Open Travel Alliance.

WSDL

The address of the WSDL file for this webservice is

<https://nextrent.locauto-rent.com/webservices/nextRentOTAService.asmx?wsdl>

access to test environment:

<https://nextrent1.locauto-rent.com/webservices/nextRentOTAService.asmx?wsdl>

Content of OTA_VehResRQ/RS messages

The OTA_VehResRQ message must be a valid XML document conforming to the OTA_VehResRQ schema. Listed below is the minimum information that must be provided for a reservation request message. If more information is to be sent, please let us know in order to look for it. See also the attached examples.

- RequestorID must have both ID and MessagePassword attributes set. These are used for authentication.
- CompanyName element of the RequestorID is optional, but if it is missing then the CompanyName of a BookingChannel must be specified. If both RequestorID and BookingChannel lack a CompanyName, then the reservation request fails.
- A voucher number may be specified if the rental is prepaid.
- Pickup and return locations must be specified using the location name, or internal code. IATA codes or other codes are not available at the moment.

- Vehicle should be specified with a SIPP code.
- Flight number or other means of transportation may be included in the message.
The response to a reservation request includes the confirmation number and the information which was memorized by the system. In case of errors, an appropriate error message is sent. Please see the attached examples.

Example

Request

```
POST /webservices/nextRentOTAService.asmx HTTP/1.1
Host: nextrent1.locauto-rent.com
Content-Type: application/soap+xml; charset=utf-8
SOAPAction: https://nextrent.locauto-rent.com/OTA_VehResRS

<?xml version="1.0" encoding="utf-8"?>

</soap:Envelope>

```

Content of OTA_VehAvailRateRQ/RS messages

The OTA_VehAvailRateRQ message may be used to obtain availability information on a specific vehicle by providing a SIPP code. In this case, the response will contain either the requested vehicle (if available) or the next available vehicles (if requested vehicle is not available). Please see the attached examples.

Example

Request

```
POST /webservices/nextRentOTAService.asmx HTTP/1.1

Content of OTA_VehCancelRQ/RS messages

The Vehicle Cancel message set has been extended from the generic OpenTravelcancel functionality. To cancel a reservation, the trading partner or customer must provide the supplier or integrator with the exact Unique ID. If the Unique ID is unknown, the trading partner may use the Retrieve Reservation message set to search for an exact match. The Vehicle Cancel message set does not require a Retrieve Reservation message. Some suppliers may require a Retrieve Reservation message to be used prior to a Cancel message. The Vehicle Cancel message set can only be used to cancel a single, specific reservation; it cannot be used to cancel multiple reservations at one time. Please see the attached examples.

Example

Request

```
POST /webservices/nextRentOTAService.asmx HTTP/1.1
Host: nextrent1.locauto-rent.com
Content-Type: application/soap+xml; charset=utf-8
SOAPAction: https://nextrent.locauto-rent.com/OTA_VehCancelRS

<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/" xmlns:ns1="http://www.opentravel.org/OTA/2003/05" xmlns:ns2="https://nextrent.locauto-rent.com">
  <SOAP-ENV:Body>
    <ns2:OTA_VehCancelRS>
      <ns1:OTA_VehCancelRQ>
        <ns1:POS>
          <ns1:Source>
            <ns1:RequestorID ID_Context="[username]" MessagePassword="[password]" />
          </ns1:Source>
        </ns1:POS>
        <ns1:VehCancelRQCore CancelType="Cancel">
          <ns1:UniqueID ID_Context="59756842-2023" Type="force"></ns1:UniqueID>
        </ns1:VehCancelRQCore>
      </ns1:OTA_VehCancelRQ>
    </ns2:OTA_VehCancelRS>
  </SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

Response

```
HTTP/1.1 200 OK
Content-Type: application/soap+xml; charset=utf-8
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xmlns:xsd="http://www.w3.org/2001/XMLSchema">

          <UniqueID ID_Context="59756842-2023" />
        </VehCancelRSCore>
      </OTA_VehCancelRSResult>
    </OTA_VehCancelRSResponse>
  </soap:Body>
</soap:Envelope>
```

Content of OTA_VehModifyRQ/RS messages

The Vehicle Modify message set is intended for customers to change information on an existing reservation. The Vehicle Modify message pair does not require a Retrieve Reservation message set to be used prior to the modify, but may be used in conjunction with one. The Vehicle Modify message set can only be used for a single, specific reservation and cannot be used to change multiple reservations at one time. Please see the attached examples.

Example

Request

```
POST /webservices/nextRentOTAService.asmx HTTP/1.1

Content of OTA_VehRetResRQ/RS messages

The Vehicle Retrieve Reservation message set is intended for customers to display their previously made reservation. This message set will allow a customer to retrieve one specific reservation. At this moment you can not retrieve a list of reservations. Please see the attached examples.

Example

Request

```

POST /webservices/nextRentOTAService.asmx HTTP/1.1
